Air-hydro

A low hydraulic pressure cylinder used at a pressure of 1.0MPa or below. Through the concurrent use of a CC series air-hydro unit, it is possible to operate at a constant or low speed or to effect an intermediate stop, just like a hydraulic unit, while using pneumatic equipment such as a valve.

⚠ Precautions

Be sure to read before handling.
Refer to p.0-39 to 0-46 for Safety Instructions and common precautions.

Precautions on handling

⚠ Warning

- Do not operate the cushion valve in the fully closed or fully opened state.
 - Using it in the fully closed state will cause the cushion seal to be damaged. Using it in the fully opened state will cause the piston rod assembly or the cover to be damaged.
- Operate within the specified cylinder speed.
 - Failure to do so will damage the cylinder and the seals.

⚠ Caution

- Do not use the air cylinder as an air-hydro cylinder. This will cause an oil leak.
- Install without twisting the bellows.
 - If the cylinder is installed with its bellows twisted, it could damage the bellows.

Disassembly/Replacement

⚠ Caution

- Do not replace the bushings or the cushion seals.
 - The bushings and the cushion seals are press-fit. To replace them, they must be replaced together with the cover assembly.
- To replace a seal, apply grease to the new seal before installing it.
 - If the cylinder is put into operation without applying grease to the seal, it could cause the seal to wear significantly, leading to premature air leakage.
- Do not replace One-touch fittings.
 - Because pipe fittings are press-fit, they must be replaced together with the cover assembly.
- Those with a bore of ø50 or more cannot be disassembled.
 - When disassembling a cylinder with a bore of ø20 to ø40, use a vise or the like to hold the wrench flats portion of the tube cover or the rod cover on one side, while placing a wrench or an adjustable wrench on the other side to loosen and remove the cover. To replace, tighten it an additional 2... from the installed position. (Those with a bore of ø50 or more cannot be disassembled because they have been tightened with greater torque. If they must be disassembled, contact SMC.)

 $\phi 32$ ————— $\pm 0.8^\circ$
 $\phi 40$ to $\phi 63$ ————— $\pm 0.5^\circ$

High speed operation/Long life

Piston speed is between 50 and 500mm/s and long life is expected.

Can operate without lubrication.

The same installation dimensions as the standard cylinder.

Auto switches can also be mounted.

It can be installed with auto switches to simplify the detection of the stroke position of the cylinder.

⚠ Precautions

Be sure to read before handling. Refer to p.0-39 to 0-46 for Safety Instruction and common precautions.

Handling

⚠ Cautions

- Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.
- If rotational torque is applied, the non-rotating guide will become deformed. Refer to the table below for the allowable range of rotational torque.

Allowable rotational torque (Nm)	ø20	ø25/ø32	ø40/ø50/ø63
	0.2	0.25	0.44

- To screw a bracket or a nut onto the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes.

To tighten, take precautions to prevent the tightening torque from being applied to the non-rotating guide.

- To replace a rod seal, contact SMC.

A rod seal could lead to an air leak, depending on the position in which it is fitted. Therefore, make sure to contact SMC if a rod seal must be replaced.

⚠ Precautions

Be sure to read before handling. Refer to p.0-39 to 0-46 for Safety Instruction and common precautions.

Handling

⚠ Cautions

① Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.

- If rotational torque is applied, the non-rotating guide will become deformed, thus affecting the non-rotating accuracy. Refer to the table below for the approximate values of the allowable range of rotational torque.

Allowable rotational torque (Nm)	ø20	ø25/ø32	ø40/ø50/ø63
	0.2	0.25	0.44

- To screw a bracket or a nut onto the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes.

To tighten, take precautions to prevent the tightening torque from being applied to the non-rotating guide.

② To replace a rod seal, contact SMC.

A rod seal could lead to an air leak, depending on the position in which it is fitted. Therefore, make sure to contact SMC if a rod seal must be replaced.

Because it is directly mounted without using brackets, its overall length is shorter, and its installation pitch can be made smaller. Thus, the space that is required for installation has been dramatically reduced.

⚠ Precautions

Be sure to read before handling.
Refer to p.0-39 to 0-46 for Safety Instruction and common precautions.
Refer to p.1.7-6 for precautions on CG1K series.

Handling

⚠ Cautions

- ① Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.
 - If rotational torque is applied, the non-rotating guide will become deformed, thus affecting the non-rotating accuracy. Refer to the table below for the allowable range of rotational torque.

Allowable rotational torque Nm	ø20	ø25/ø32	ø40/ø50/ø63
	0.2	0.25	0.44

- To screw a bracket or a nut onto the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes. To tighten, take precautions to prevent the tightening torque from being applied to the non-rotating guide.

- ② To replace a rod seal, contact SMC.

A rod seal could lead to an air leak, depending on the position in which it is fitted. Therefore, make sure to contact SMC if a rod seal must be replaced.

Series CG1□Q

Designed with a low sliding resistance of the piston, this air cylinder is ideal for applications such as contact pressure control, which requires smooth movements at low pressures.

Low sliding resistance

Stable sliding resistance

The sliding resistance remains stable even when the operating pressure changes.

Long strokes can be manufactured.
Auto switches can be mounted.

JIS symbol

Precautions

- Be sure to read before handling.
- Refer to p.0-39 to 0-43 for Safety Instruction and common precautions.
- Refer to p.1.7-6 for precautions on series CG1.

Handling

Warning

- ① In the direction of low friction operation, speed control must be effected through the meter-in system. With meter-out control, the exhaust pressure will increase and create a greater sliding resistance.

With auto switch

Auto switches can be mounted. Mounting position/height is the same as the double acting/single rod style. Refer to p.1.7-12 and 1.7-13.

Mounting Bracket Part No.

Refer to p.1.7-45 for other mounting brackets.

Auto Switch Mounting Bracket Part No.

Refer to p.1.7-45 for part number of the switch mounting band for adding auto switches on built-in magnet cylinders.

1-7-44

Application Example

A low friction cylinder is used in combination with a precision regulator (IR Series, etc.).

Stroke Table

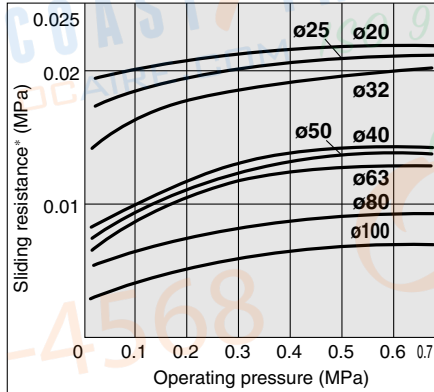

Bore size (mm)	Standard stroke (mm) ⁽¹⁾	Long stroke ⁽²⁾ (mm)
20	25, 50, 75, 100, 125, 150, 200	201 to 350
25		301 to 400
32		301 to 450

50/63	250, 300	301 to 600
80		301 to 700
100		301 to 700

- Note 1) Other intermediate strokes can be manufactured upon receipt of order. Refer to p.1.7-46 for dimensions.
- Note 2) The longer the stroke, the greater the sliding resistance could become, due to the sagging of the piston rod. Therefore, consider installing a guide for such operation.
- Note 3) Contact SMC for applications that exceed the stroke range shown above. (The maximum manufacturable stroke is 1500mm.)

Low Friction: Double Acting Single Rod Series CG1□Q

Sliding Resistance of the Low Friction Side

* Conversion into the cylinder operating pressure:

Selecting the Low Friction Direction

- To use the air cylinder as a balancer, pressurize it only from one of the ports as shown in the application example, and keep the other port open to the atmosphere.

To operate by applying pressure from the rod cover port: Low friction direction B type <Application example ①>

To operate by applying pressure from the head cover port: Low friction direction F type <Application example ②>

In either case, if the piston rod is moved by an external force, it will effect low friction operation both in the extending and retracting directions.

- When it is necessary to operate it as an ordinary double acting cylinder at an even lower operating speeds, use a low speed cylinder (see "Made to Order" on Page SPECIALS-1).
