

Slide Unit

Series CX2/CXWM/CXWL

Slide Bearing/CX2:ø10, ø15, ø25 CXWM:ø10, ø16, ø20, ø25, ø32
Ball Bushing Bearing/CXWL:ø10, ø16, ø20, ø25, ø32

Provided with shock absorbers to absorb impact and noise.

The slide unit can absorb energy in a wide range, in high speed, low-load applications to low speed, high-load applications, without requiring adjustments.

Ensures high positional accuracy.

A high level of positional accuracy can be attained because the two parallel piston rods prevent the rods from rotating, and the workpiece mounting surface and the parallelism of the piston rods are made highly precise.

Auto switches can be installed.

Smooth operation and high thrust.

Mountable on the housing or on the plate.

The slide unit can be mounted on the housing or on the plate, depending on the application. It can also be bolted from the bottom or from the top. The piping can be fitted to the port in any of the three positions, according to how the unit is mounted.

<Fixing the plate> The housing moves.

<Fixing the housing> The plate moves.

Series CX2/CXWM/CXWL

Prior to Use

Maximum Allowable Moment: CX2N, CXWM, CXWL

Operate within the operating range and under the allowable moment indicated in the table below.

- CX2N
 — CXWM (Slide bearing)
 - - - CXWL (Ball bushing bearing)

Allowable Moment (M_2) (N·m)

Bore size (mm)	10	15	16	20	25	32
CX2N	0.098	0.294	—	—	1.029	—
CXWM	0.108	—	0.549	0.809	1.029	2.695
CXWL	0.108	—	0.549	0.809	1.201	2.695

Note) M_2 is steady regardless of the strokes.

Allowable Kinetic Energy

Load mass and cylinder speed should be observed within the range given in the graph below.
 To adjust the cylinder speed, use a speed controller.

Series CX2

Prior to Use

1. Changing from the non-auto switch specifications to the auto switch specifications
2. Changing mounting style of the auto switch specifications

Series CX2

1. In Series CX2, to change from the specification without auto switch to the plate mounting style with auto switch or to the housing mounting style with auto switch, refer to tables (1) and (2) before ordering.

2. In Series CX2, to change from the plate mounting style with an auto switch to the housing mounting style with an auto switch or vice versa, refer to tables (1) and (2) before ordering.

Table (1) Plate Mounting Style with Auto Switch (CDPX2N□□-□)
Component Parts for Mounting Switches and No. of Component Parts

Component parts	Material	ø10	ø15	ø25

** Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Consult with SMC regarding water resistant types with the above model numbers.

* Lead wire length symbols: 0.5 m Nil (Example) F79W
3 m L (Example) F79WL
5 m Z (Example) F79WZ
None N (Example) J79CN

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Refer to pages 1784 and 1785 for details of auto switches with a pre-wired connector.

* Auto switches are shipped together (not assembled).

Specifications

Type		Non-lube	Air-hydro type
Fluid		Air	Hydraulic fluid
Proof pressure		1.5 MPa	
Max. operating pressure		1.0 MPa	
Min. operating pressure	CX2N10	0.15 MPa	—
	CX2□15	0.15 MPa	
	CX2□25	0.10 MPa	
Ambient and fluid temperature		-10°C to +60°C	
Piston speed (Non-lube)	With adjusting bolt	30 to 200 mm/s	Refer to Table (1).
	With shock absorber	30 to 500 mm/s	
Cushion		With shock absorber (Option)	
Stroke adjustable range		Standard stroke: ±2 mm	
Max. load mass ⁽¹⁾	CX2N10	9.8 N	
	CX2□15	29.4 N	
	CX2□25	58.8 N	
Non-rotating accuracy (Except piston rod deflection)	CX2N10	±0.1°	
	CX2□15	±0.04°	
	CX2□25	±0.02°	
Accessory (Option)		Straight knock pin (2 pcs.), Adjusting bolt (-X138) ⁽²⁾ Shock absorber	

Note 1) Place the center of gravity of the load as close to the center of the slide unit as possible during operation. If they are placed far apart, consult with SMC.

Note 2) "-X138" has a stroke adjustable range of 12.5 mm on one side.

Table (1) Air-hydro/Piston Speed

Model	Plate mounting	Housing mounting
CX2H15	Refer to the below. ^{Note 1)}	5 to 50 mm/s
CX2H25	5 to 40 mm/s	5 to 100 mm/s

Note 1) Consult with SMC when the air-hydro type is mounted on a plate.

Note 2) Consult with SMC when units are used at a low speed (10 mm/s or faster) (when intermediate stops are not required) since -XB13 (Low speed specification) is available.

Note 3) When using the air-hydro type, use the double side hydro unit.

Shock Absorber Specifications

Shock absorber		RB0805	RB1006
Applicable slide unit		CX2N10, CX2□15	CX2□25
Maximum energy absorption (J)		0.98	3.92
Stroke absorption (mm)		5	6
Max. collision speed (m/sec)		0.05 to 5	
Max. operating frequency (cycle/min)		80	70
Max. allowable thrust (N)		147	353
Ambient temperature range (°C)		-10 to 80	
Spring force (N)	Extended	1.96	4.22
	Retracted	3.83	6.18
Mass (g)		15	25

* The above shows the maximum absorption energy per cycle. Accordingly, the operating frequency can be increased in accordance with the absorption energy.

* The shock absorber service life is different from that of the cylinder body depending on the operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

Theoretical Output

Model	Rod size (mm)	Piston area (mm ²)	Operating pressure (MPa)							
			0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
CX2N10	6	101	20	30	40	51	61	71	81	91
CX2□15	8	207	41	62	83	104	124	145	166	186
CX2□25	14	597	119	179	239	299	358	418	478	537

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm²)

Made to Order Specifications
(For details, refer to pages 1851 to 2021.)

D-J79C	24	17.5	17
D-F7LF	30	15	11.5

Note 2) For only 25 strokes, two magnets for auto switches are installed in the housing.

Operating Range

(mm)

Auto switch model		Applicable cylinder size		
		10	15	25
D-A7□/A80 D-A7□H/A80H D-A73C/A80C	Housing mounting	—	6	6
	Plate mounting	6		
D-E7□A/E80A	Housing mounting	6	—	—
D-F7□/J79 D-F7□V/J79C D-F7□W/F7□WV D-F7BAL/F7BAVL D-F79F/F7NTL	Housing mounting	—	2.5	2.5
	Plate mounting	2.5	2.5	3

* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approximately $\pm 30\%$ dispersion). It may vary substantially depending on an ambient environment.

Besides the models listed in How to Order, the following auto switches are applicable. Refer to pages 1719 to 1827 for the detailed specifications.

Auto switch type	Model	Electrical entry (Fetching direction)	Features	Applicable cylinder size	
				Housing mounting	Plate mounting
Solid state	D-F7NTL	Grommet (In-line)	With timer	ø15, ø25	ø10, ø15, ø25

* With pre-wired connector is also available for D-F7NTL type. For details, refer to pages 1784 and 1785.
 * It is impossible to mount solid state auto switches to the housing mounting ø10.

*** Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Consult with SMC regarding water resistant types with the above model numbers.

* Lead wire length symbols: 0.5 m Nil (Example) F79W
3 m L (Example) F79WL
5 m Z (Example) F79WZ
None N (Example) J79CN

* Solid state auto switches marked with "○" are produced upon receipt of order.
** It is impossible to mount solid state switches to the housing mounting ø10.

- Since there are other applicable auto switches than listed, refer to page 517 for details.
- For details about auto switches with pre-wired connector, refer to pages 1784 and 1785.
- * Auto switches are shipped together (not assembled).

Series CXWM

Built-in shock absorber

This is a built-in shock absorber style in which the shock absorber is enclosed in the housing. Compared to Series CX2 with shock absorber, this style achieves space savings in the longitudinal direction (except 25 mm stroke).

Dramatically reduced installation labor

The machining precision required for positioning during the installation of the cylinder has been reduced through the adoption of a special pin hole machining process, thus decreasing the amount of labor involved in adjustment.

Provided with an end lock mechanism

An end lock is also available, which maintains the cylinder's original position even if the air supply is interrupted.

Made to Order Specifications
(For details, refer to pages 1851 to 2021.)

Symbol	Specifications
—XB11	Long stroke type
—XB13	Low speed cylinder (5 to 50 mm/s)
—XC22	Fluororubber seal
—X146	Hollow piston rod
—X138	Adjustable stroke
—X168	Helical insert thread
—X169	2 built-in magnets

Standard Stroke

Model	Standard stroke (mm)							
	25	50	75	100	125	150	175	200

Note 1) The strokes marked with "(*)" has an absorber of double side plate mounting style.

Note 2) The strokes marked with "(*)" has an absorber of single side plate mounting style.

Specifications

Type	Non-lube	
Fluid	Air	
Proof pressure	1.5 MPa	
Max. operating pressure	1.0 MPa	
Min. operating pressure	CXWM10/16	0.15 MPa
	CXWM20/25/32	0.1 MPa
Ambient & fluid temperature	-10 to 60°C (No freezing)	
Piston speed (Non-lube)	30 to 500 mm/s	
Cushion	Shock absorber	
Stroke adjustable range	Standard stroke: ±2 mm	
Accessory (Option)	Straight knock pin (2 pcs.), Adjusting bolt* (-X138)	

* "-X138" has a stroke adjustable range of -12.5 mm on one side.

Maximum Load Mass/Non-rotating Accuracy/Maximum Holding Force

Model	CXWM10	CXWM16	CXWM20	CXWM25	CXWM32
Maximum load mass*	1 kg	4 kg	5 kg	6 kg	10 kg
Non-rotating accuracy (Deflection of a piston rod is not included.)	±0.09°	±0.03°	±0.03°	±0.02°	±0.01°
Maximum holding force (End lock model)	39.2 N	98.1 N	147.1 N	245.2 N	392.3 N

* Place the center of gravity of the load and center of the slide unit close during operation. If they are placed far apart from each other, please consult with SMC.

Shock Absorber Specifications

Shock absorber (1)		RB0805-X552	RB0805	RB1006-X552	RB1006	RB1411-X552	RB1411
Applicable slide unit		CXWM10/16- □□		CXWM20/25- □□		CXWM32- □□	
Maximum energy absorption (J)		0.98		3.92		14.7	
Stroke absorption (mm)		5		6		11	
Max. collision speed (m/sec)		0.05 to 5					
Max. operating frequency (cycle/min) (2)		80		70		45	
Max. allowable thrust (N)		147		353		667	
Ambient temperature range (°C)		-10 to 80					
Spring force (N)	Extended	1.96		4.22		6.86	
	Retracted	3.83		6.18		15.30	
Mass (g)		15		25		65	

Note 1) "-X552" is an exclusive shock absorber installed in the housing, and is the screw not attached specification of the outer part of the outer tube. The shock absorber plate mounting style of 25 and 50 strokes have the screw attached specification.

Note 2) It denotes the values at the maximum energy absorption per one cycle. Therefore, the operating frequency can be increased according to the energy absorption.

* The shock absorber service life is different from that of the cylinder depending on the operating conditions. Refer to the Series RB Specific Product Precautions for the replacement period.

Theoretical Output

(N)

Model	Rod size (mm)	Piston area (mm ²)	Operating pressure (MPa)							
			0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9

*** Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Consult with SMC regarding water resistant types with the above model numbers.

* Lead wire length symbols: 0.5 m Nil (Example) F79W
3 m L (Example) F79WL
5 m Z (Example) F79WZ
None N (Example) J79CW

* Solid state auto switches marked with "○" are produced upon receipt of order.
** It is impossible to mount solid state switches to the housing mounting ø10.

- Since there are other applicable auto switches than listed, refer to page 517 for details.
- For details about auto switches with pre-wired connector, refer to pages 1784 and 1785.

Series CXWL

Built-in shock absorber

This is built-in shock absorber style in which the shock absorber is enclosed in the housing.

Dramatically reduced installation labor

The machining precision required for positioning during the installation of the cylinder has been reduced through the adoption of a special pin hole machining process, thus decreasing the amount of labor involved in adjustment.

High-precision ball bushing

The bearings made of ball bushings decrease the rise in starting pressure that could be caused by a load imbalance.

This also enables smooth operation by ensuring stable travel resistance.

Provided with an end lock mechanism

An end lock is also available, which maintains the cylinder's original position even if the air supply is interrupted.

Made to Order Specifications
(For details, refer to pages 1851 to 2021.)

Symbol	Specifications
—XB11	Long stroke type
—XB13	Low speed cylinder (5 to 50 mm/s)
—XC22	Fluororubber seal
—X146	Hollow piston rod
—X138	Adjustable stroke
—X168	Helical insert thread
—X169	2 built-in magnets

Standard Stroke

Model	Standard stroke (mm)							
	25	50	75	100	125	150	175	200

Note) The strokes marked with "(*)" has an absorber of single side plate mounting style.

Specifications

Type	Non-lube	
Fluid	Air	
Proof pressure	1.5 MPa	
Max. operating pressure	1.0 MPa	
Min. operating pressure	CXWL10/16	0.15 MPa
	CXWL20/25/32	0.10 MPa
Ambient & fluid temperature	-10 to 60°C (No freezing)	
Piston speed (Non-lube)	30 to 500 mm/s	
Cushion	Shock absorber	
Stroke adjustable range	Standard stroke: ±2 mm	
Accessory (Option)	Straight knock pin (2 pcs.), Adjusting bolt* (-X138)	

* "-X138" has a stroke adjustable range of -12.5 mm on one side.

Maximum Load Mass/Non-rotating Accuracy/Maximum Holding Force

Model	CXWL10	CXWL16	CXWL20	CXWL25	CXWL32
Max. movable mass ⁽¹⁾	1 kg	4 kg	5 kg	7 kg	10 kg
Non-rotating accuracy ⁽²⁾ (Deflection of a piston rod is not included.)	± 0.09°	± 0.03°	± 0.03°	± 0.02°	± 0.01°
Max. holding force (End lock model)	39.2 N	98.1 N	147.1 N	245.2 N	392.3 N

Note 1) Place the center of gravity of the load and center of the slide unit close during operation. If they are placed far apart from each other, please consult with SMC.

Note 2) The factors are obtained under the conditions of a 25 strokes plate is pushed out.

Shock Absorber Specifications

Shock absorber ⁽¹⁾		RB0805-X552	RB1006-X552	RB1411-X552
Applicable slide unit		CXWL10/16-□□	CXWL20/25-□□	CXWL32-□□
Maximum energy absorption (J)		0.98	3.92	14.7
Stroke absorption (mm)		5	6	11
Max. collision speed (m/sec)		0.05 to 5		
Max. operating frequency (cycle/min) ⁽²⁾		80	70	45
Max. allowable thrust (N)		147	353	667
Ambient temperature range (°C)		-10 to 80		
Spring force (N)	Extended	1.96	4.22	6.86
	Retracted	3.83	6.18	15.30
Mass (g)		15	25	65

Note 1) "-X552" is an exclusive shock absorber installed in the housing, and is the screw not attached specification of the outer part of the outer tube. "CXWL32-25" is mounted on a single side of the plate and of the screw attached specification.

Note 2) It denotes the values at the maximum energy absorption per one cycle. Therefore, the operating frequency can be increased according to the energy absorption.

* The shock absorber service life is different from that of the cylinder depending on the operating conditions. Refer to the Series RB Specific Product Precautions for the replacement period.

Theoretical Output

(N)

Model	Rod size (mm)	Piston area (mm ²)	Operating pressure (MPa)							
			0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
CXWL10-□□	6	101	20	30	40	51	61	71	81	91
CXWL16-□□	10	245	49	74	98	123	147	172	196	221
CXWL20-□□	12	402	80	121	161	201	241	281	322	362

D-F7□/J79 D-F7□V/J79C D-F7□W/F7□WV D-F7BAL/F7BAVL D-F79F/F7NTL	Housing mounting	—	4	2.5	3	3
	Plate mounting	3	3			2.5

* Since this is a guideline including hysteresis, not meant to be guaranteed.
(Assuming approximately ±30% dispersion)
There may be the case it will vary substantially depending on an ambient environment.

Other than the applicable auto switches listed in “How to Order”, the following auto switches can be mounted.
For detailed specifications, refer to pages 1719 to 1827.

Auto switch type	Model	Electrical entry (Fetching direction)	Features	Applicable cylinder size	
				Housing mounting	Plate mounting
Solid state	D-F7NTL	Grommet (In-line)	With timer	ø16, ø20 ø25, ø32	ø10, ø16 ø20, ø25 ø32

* With pre-wire connector is available for D-F7NTL type, too. For details, refer to pages 1784 and 1785.
* It is impossible to mount solid state auto switches to the housing mounting ø10.

Specific Product Precautions 1

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

⚠ Warning

1. Take precautions to prevent your fingers or hands from getting caught between the plate and the housing.
 - Take sufficient care to avoid getting your hands or fingers caught when the cylinder is operated.

⚠ Caution

1. Make sure that the cylinder mounting surface is flat (a flatness of 0.05 or less {reference value}).
If it is not flat, it could lead to malfunction.
2. Make sure not to scratch or gouge the cylinder mounting surface.
Be aware that if the flatness of the housing mounting surface or the mounting surface of the plates on both sides is affected, it could lead to a malfunction.
3. Be careful not to twist the two piston rods.
If the piston rods are twisted or bent when mounting the housing, the operating resistance could become abnormally high or the bearings could wear prematurely, leading to reduced accuracy or air leakage.
4. Consider reinforcing the plates.
When the cylinder is mounted on the housing, and the plates are used for high-speed operation or used as a pusher, use a connector plate to bridge both plates. Failure to do so could cause the snap ring to become detached or the set screws to shift, causing the plates to fall off.

Recommended Pneumatic Circuit

⚠ Caution

1. This is necessary for the proper operation and release of the lock for cylinders with an end lock.

Precautions for Handling the End Lock Mechanism

⚠ Caution

1. Do not use 3 position solenoid valves.
Avoid using this cylinder in combination with a 3 position solenoid valve (particularly the closed center metal seal type). If air pressure becomes sealed inside the port of the side that contains the lock mechanism, the lock will not engage. Even if the lock is engaged at first, the air that leaks from the solenoid valve could enter the cylinder and cause the lock to disengage as time elapses.
2. Back pressure is required to release the end lock.
Be sure that air is supplied to the cylinder side without the locking mechanism (For cylinders with a double lock, the side with an unlocked piston rod) before starting operating, as shown in the drawing on the left. The lock may not be released. (Refer to the section on releasing the lock.)
3. Disengage the lock before installing or adjusting the cylinder.
The lock could become damaged if the cylinder is installed with its lock engaged.
4. Operate with a load ratio of 50% or less.
If the load ratio exceeds 50%, this may cause problems such as failure of the lock to release, or damage to the lock unit.
5. Do not operate multiple cylinders in synchronization.
Avoid applications in which two or more end lock cylinders are synchronized to move one workpiece, as one of the cylinder locks may not be able to release when required.
6. Use a speed controller with meter-out control.
Lock cannot be released occasionally by meter-in control.
7. Adjust the stroke within the range of the slotted hole of the lock finger.
As the hole for mounting the lock finger is slotted, the lock finger may be adjusted and mounted in accordance with the adjustment amount of the adjusting bolt. The adjustment amount of the adjusting bolt is ± 2 mm (± 1 mm for each side).
8. Regarding manual disengagement
Insert a Phillips screwdriver through the lock finger hole to push the lock piston down and slide it in the unlocking direction. When doing so, take precautions to prevent your fingers or hands from getting caught between the housing plate and the lock.

Operating Pressure

⚠ Caution

1. Apply a pressure more than the minimum operating pressure to the port on the side where the locking mechanism activates. The pressure is necessary to release the lock.

Releasing the Lock

⚠ Warning

1. Before releasing the lock, be sure to supply air to the side without the lock mechanism, so that there is no load applied to the lock mechanism when it is released. (Refer to the recommended pneumatic circuit.) If the lock is released when the port on the other side is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected to an excessive force and be damaged. Furthermore, sudden movement of the piston rod is extremely dangerous.

Series CXW

Specific Product Precautions 2

Be sure to read before handling. Refer to front matters 42 and 43 for Safety Instructions and pages 3 to 11 for Actuator and Auto Switch Precautions.

Handling on Shock Absorber

⚠ Caution

1. Use caution not to be exposed to cutting oil, water, or dust, etc.

The RB series cannot be used under conditions in which fluids such as cutting oil or water are present in atomized form or come in direct contact with the piston rod, or in which dust could adhere to the piston rod. Such conditions would cause malfunction.

2. Do not operate the shock absorber in an environment that poses the risk of corrosion.

The shock absorber could rust if used in an environment that poses the risk of corrosion.

Refer to the respective construction for type of material that is used in the shock absorber.

3. Abide by the table below for the tightening torque for a mounting nut.

Shock absorber model	RB0805	RB1006	RB1411
Applicable slide unit	CXWM ₁₀ ⁰ -25	CXWM ₂₅ ⁰ -25	CXWM32-25, 50 CXWL32-25
Thread O.D. (mm)	M8 x 1.0	M10 x 1.0	M14 x 1.5
Thread prepared hole size (mm)	ø7.1 ^{+0.1} ₀	ø9.1 ^{+0.1} ₀	ø12.7 ^{+0.1} ₀
Tightening torque (N·m)	1.67	3.14	10.8

4. Do not scratch the sliding portion of the piston rod or the outside threads of the outer tube.

Do not scratch or gouge the sliding portion of the piston rod or the outside threads of the outer tube by striking it with an object, squeezing it, or by forcefully wedging a set screw in it. Failure to observe this precaution could damage the seals, which could lead to oil leakage and malfunction. Furthermore, scratches or gouges on the outside threads of the outer tube could prevent the shock absorber from being mounted onto the frame, or its internal components could deform, leading to a malfunction.

5. Never turn the screw on the bottom of the body.

(This is not an adjusting screw.)

Turning it could cause oil leakage.

6. Check the mounting nut is not loosen.

The shock absorber could become damaged if it is used in a loose state.

7. Pay attention to any abnormal impact sounds or vibrations.

If the impact sounds or vibrations have become abnormally high, the shock absorber may have reached the end of its service life. If this is the case, replace the shock absorber.

If use is continued in this state, it could damage the equipment to which the shock absorber is mounted.

8. Refer to the Instruction Manual for how to replace the built-in shock absorber for the CXW series.

Service Life and Replacement Period of Shock Absorber

⚠ Caution

1. Allowable operating cycle under the specifications set in this catalog is shown below.

1.2 million cycles RB08□□

2 million cycles RB10□□ to RB2725

Note) Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.

Auto Switch Selection for the Adjustable Stroke Type (-X138)

⚠ Caution

1. When 50 stroke is adjusted to 40 stroke or less with the adjustable stroke type (-X138), auto switches may not be able to be mounted properly since they interfere with each other if the 2 in-line entry auto switches are used.

When strokes are adjusted to 40 stroke or less, select the perpendicular entry type or additionally select auto switches with 2 built-in magnets (-X169).
